Task is to create a function **calculate_subscription()** which will take the following arguments:

1. *expiry_date*: String of format dd/mm/yyyy
2. *months_to_buy*: Integer which will be in between 1 and 11 (both inclusive)
3. *monthly_cost*: Integer. Cost of subscription per month

The function should return:

1. *new_expiry*: New expiry date of the user
2. *cost:* Cost of the subscription
